RESULTS

Descriptive statistics

Table 1 shows the descriptive statistics of the variables used in the study. The mean age of the participants was 36.7 years, with a range from 20 to 65 years. The majority of the participants were male (70.2%), and the majority were married (67.2%). The majority of the participants were employed (80.2%), and the majority were from the middle class (60.2%). The majority of the participants were from the urban area (60.2%). The majority of the participants were from the public sector (60.2%).

The relationship between variables

Table 2 shows the relationship between the variables. The relationship between the variables is shown in the following table:

It provides:

- day-to-day support for our students, both administrative and practical, through our dedicated team
- a Research Student Study Space with both PCs and laptop docking stations
- a comprehensive Researcher Development Programme for students and their supervisors
- a programme of student-led conferences and seminars

Worcester Biomedical Research Group

The Worcester Biomedical Research Group (WBRG) aims to promote multidisciplinary Biomedical Science research at the University of Worcester and fosters collaborations between staff (cross-institute), students and local health / industrial organisations.

Building sustainable societies through research into disease prevention, medical treatment and diagnostics, lies at the heart of the WBRG research ethos. We are a research-led institution. We are a research-led institution. We are a research-led institution.
